These stats pertain only to militants in Gaza and all rocket fire from Gaza into Israel since 2005

There is a pattern in which the highest concentration of rocket fire against Israel within a calendar year is occurring when Mars is within 30 degrees of the lunar node. This is happening at a rate of 70% since 2005.

In every single year since 2005, the month containing the highest rocket fire for the year is a month in which Mars had been within 30 degrees of the lunar node at some point.

For five consecutive years, I have been able to predict when the highest concentration of rocket fire against Israel would occur within a calendar year.

In the last five years it was predicted that the highest escalation of rocket fire within the calendar year would occur during the time when Mars would be within 30 degrees of the lunar node.

According to Gaza rocket fire data going back to 2005, Hamas and Islamic Jihad fired a total of 26,722 rockets at Israel

Since 2005 18,636 rockets were fired at Israel while Mars was within 30 degrees of the lunar node.

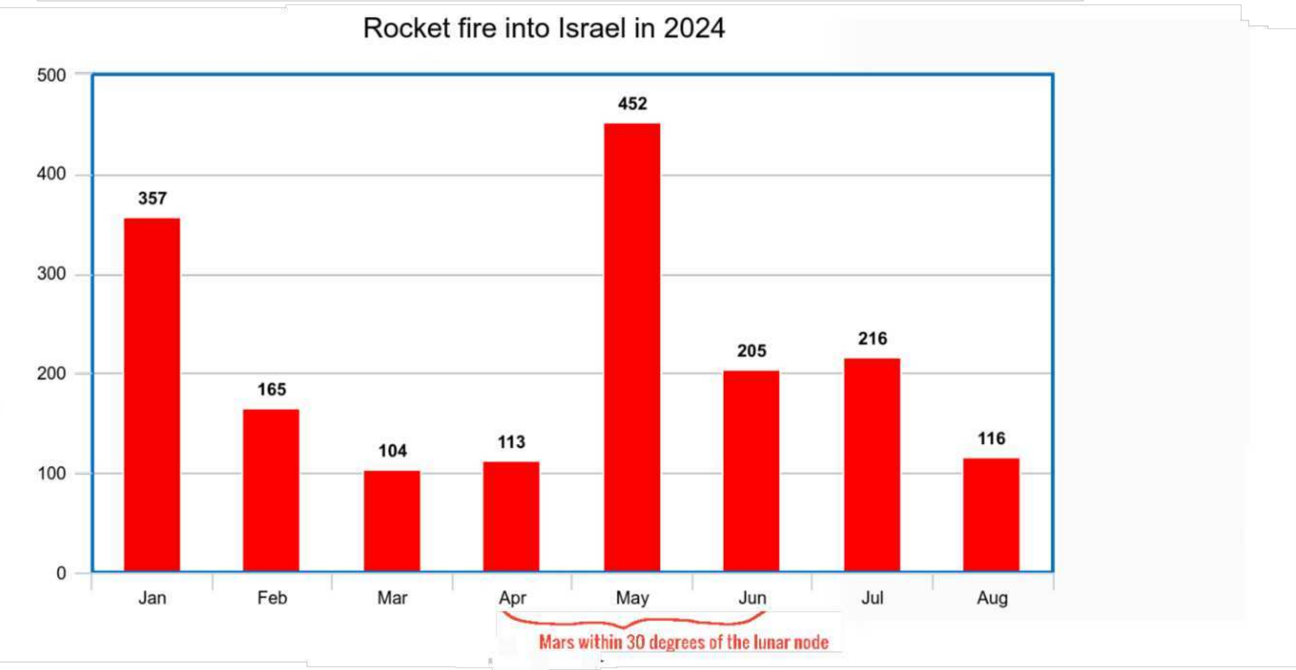

At any other time since 2005 , 8086 rockets were fired at Israel

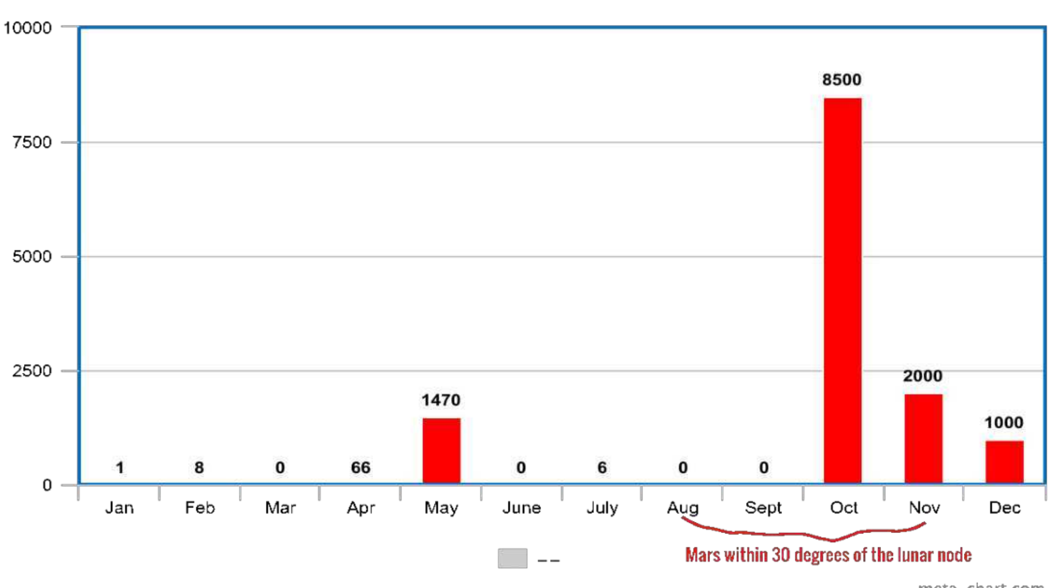

68% of total rockets fired at Israel since 2005 were fired while Mars was within 30 degrees of the lunar node

In 15/20 years between 2005 and 2024, most rockets fired during the calendar year were fired while Mars was within 30 degrees of the lunar node.

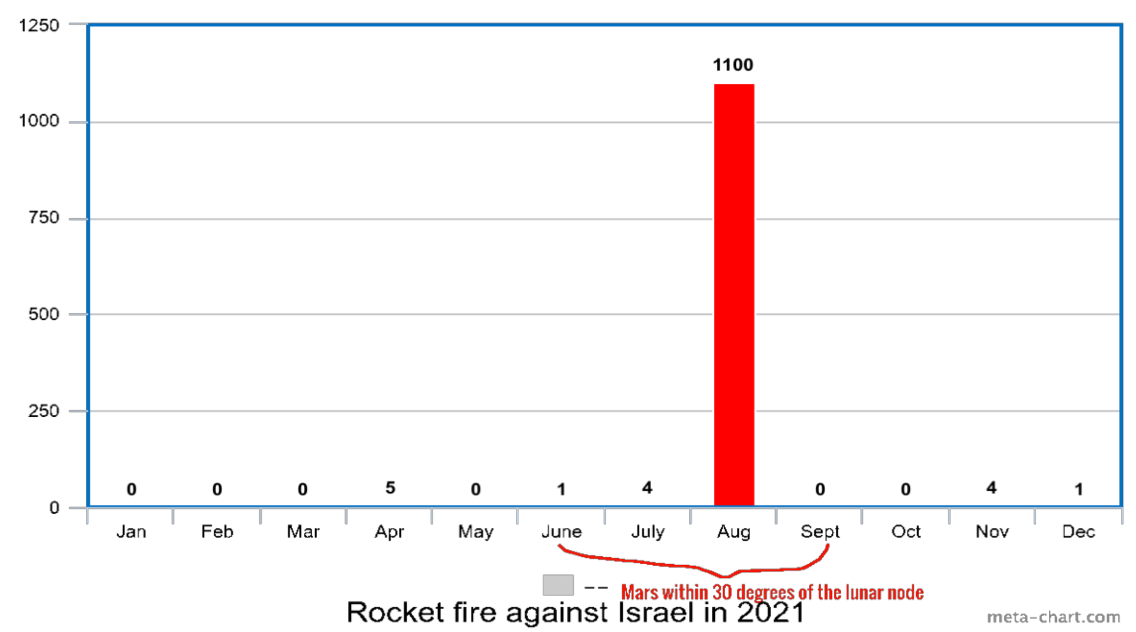

In 20/20 years between 2005 and 2024, the month containing the highest rocket fire for the year was also when Mars was within 30 degrees of the lunar node

Here are graphs of representing rocket attacks against Israel since 2005
